PORTFOLIO ahmadjon.pages.dev

Software engineer who builds production backends end to end: REST and real-time APIs, multi-tenant data isolation, background jobs, payment flows and multi-provider AI pipelines, deployed on servers I run myself. Graduate Software Engineer (GPA 4.9) and two-time ICPC Northern Eurasia Finals qualifier.

EXPERIENCE

ZynySoft — Software Engineer (Zynygram, Klipmatic)

May 2026 – now

- Klipmatic (co-founder, lead engineer): Django API with 14 AI models from 5 providers behind an ordered, health-checked fallback chain; atomic job creation and an append-only credit ledger with idempotent refunds (row locks, fixed lock order).
- Zynygram: wrote most of the AI gateway (16 models, 4 providers), the support chat and the recommendation service on Django, Channels and Celery; stress-tested at 272 RPS on 2 vCPU with 0% errors.

InSoft Technology — Software Engineer

Aug 2024 – Apr 2026

- Backend of a multi-tenant SaaS platform (Django 5.2, PostgreSQL schema per tenant, Celery, Redis): REST API design, tenant-bound JWTs, idempotent writes via client UUIDs.
- Self-run security and bug audit: hardened tenant isolation and fixed 57 confirmed bugs (4 critical); cross-script search with transliteration + pg_trgm; automated encrypted backups.

BandBooster AI — Full-Stack Developer & Founder

Apr 2025 – Apr 2026

- IELTS mock-testing platform: automated writing and speaking scoring with LLM APIs and Azure Speech, S3 audio ingestion, async processing with Celery; multi-tenant version piloted with 2 learning centres; \$600+ in revenue from one centre.

BuyUp — Founder & Flutter/Backend Developer

Aug 2023 – Mar 2025

- Gaming payment system with \$40K+ in sales in a year: checkout API sped up with Redis caching and PostgreSQL indexing and pooling; authentication, rate limiting and monitoring against abuse.

Freelance — Backend & Flutter Developer

Late 2021 – now

- ZAKO: Fastify + TypeScript backend work and an AI pipeline turning textbook PDFs into grounded questions with an LLM judge (about \$1.5 per book).

SKILLS

Backend Python, Django, DRF, Channels, Celery, FastAPI, Node.js, Fastify, TypeScript

Data PostgreSQL (multi-tenant, pg_trgm), Redis, MongoDB, S3

Infra Linux VPS, nginx, systemd, Docker, GitHub Actions, Let's Encrypt

AI multi-provider routing, LLM pipelines, grounding & judging, speech scoring; 2 years of spec-driven, agentic coding with Claude Code, Codex and Gemini

Client Flutter (6+ years), Next.js, Vue

EDUCATION & AWARDS

- B.Sc. Software Engineering, Fergana State Technical University, 2022–2026 · GPA 4.9/5
- Two-time ICPC Northern Eurasia Finals qualifier (2023, 2025)
- ICPC Uzbekistan Regional 2023 — Third Award · FBTUIT CUP 2023 — 3rd
- Meta Back-End Developer (Coursera) · Speaker, DevPevuz Community
- Mentored 40+ students in algorithms · English (B1), Uzbek (native)
